

### Location

Collie, WA

### Client

Wesfarmers Premier Coal Limited  
(WPCL)

### Total Project Value

\$5 Million

### Role

EPCM Contractor (2004)

### Services Provided

Project, Construction and Design Management  
Project Cost Estimating  
Cost Control and Reporting  
Contracts Preparation and Management  
Procurement and Expediting  
Planning and Scheduling  
Pre-commissioning, Commissioning and Handover

### Project Overview

Appointed as the Engineering, Procurement and Construction Management (EPCM) contractor in association with engineering consultants Wave Engineering, for the upgrade to the Coal Handling Plant (CHP) at Wesfarmers Premier Coal (WPCL) Collie mine site.

The project involved modification of the existing Coal Handling Plant, including the installation of a screen plant which produces a nut coal product, erection of a 500 tonne truck load-out bin, associated feed conveyors, relocation of an existing sample station and installation of a new HV power supply including transformer and MCC building.

The project required integration with the existing CHP infrastructure and co-ordination with operations to ensure that production was not interrupted during construction.

The project was completed successfully on a fast tracked basis, operating under tight budget constraints.
